

# DEVOPS FIRST TASK

## 1. git stash

This command is used to store or remove the temporary changes which are recently made.

```
C:\Windows\System32\cmd.exe
C:\Users\Manikanta\OneDrive\Desktop\learningGit>git status
On branch develop
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   test.txt

no changes added to commit (use "git add" and/or "git commit -a")

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git stash
Saved working directory and index state WIP on develop: 5a68db2 add

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git stash list
stash@{0}: WIP on develop: 5a68db2 add

C:\Users\Manikanta\OneDrive\Desktop\learningGit>
```

## 2.git merge

This command is used to merge different branches into a single branch.

```
C:\Users\Manikanta\OneDrive\Desktop\learningGit>git branch
  checkout
* develop
  master

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git checkout master
warning: unable to rmdir 'LearningGIIt': Directory not empty
Switched to branch 'master'

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git branch
  checkout
  develop
* master

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git merge develop
Merge made by the 'ort' strategy.
 LearningGIIt | 1 +
 1 file changed, 1 insertion(+)
 create mode 160000 LearningGIIt

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git branch
  checkout
  develop
* master

C:\Users\Manikanta\OneDrive\Desktop\learningGit>git merge develop
Already up to date.

C:\Users\Manikanta\OneDrive\Desktop\learningGit>
```

### 3.git fetch

This command is used for downloading the contents/branches/commits/repositories etc... from a remote

```
C:\Users\Manikanta\OneDrive\Desktop\clone 2\LearningGIT>git fetch
remote: Enumerating objects: 54, done.
remote: Counting objects: 100% (50/50), done.
remote: Compressing objects: 100% (37/37), done.
remote: Total 54 (delta 13), reused 37 (delta 11), pack-reused 4
Unpacking objects: 100% (54/54), 1.85 MiB | 107.00 KiB/s, done.
From https://github.com/snehal-herovired/LearningGIT
* [new branch]      20A91A0496      -> origin/20A91A0496
* [new branch]      21MH5A0351      -> origin/21MH5A0351
* [new branch]      21a95a0411      -> origin/21a95a0411
error: cannot lock ref 'refs/remotes/origin/21mh5a0351': is at 26621e6fe9cc4d31a3ea74f3

```

### 4.difference between fetch and pull

"Git pull" copy the contents directly into the local repository from remote repository, whereas "git fetch" shows the new change without merging them directly.

```

C:\Users\Manikanta\OneDrive\Desktop\clone 2\LearningGIT>git pull
remote: Enumerating objects: 1049, done.
remote: Counting objects: 100% (609/609), done.
remote: Compressing objects: 100% (449/449), done.
remote: Total 1049 (delta 160), reused 554 (delta 133), pack-reused 440
Receiving objects: 100% (1049/1049), 70.68 MiB | 2.35 MiB/s
Receiving objects: 100% (1049/1049), 71.19 MiB | 2.31 MiB/s, done.
Resolving deltas: 100% (223/223), completed with 6 local objects.

```

In "git fetch" the repository data is updated in .git and for "git pull" local repository is updated directly since entire contents are copied/pulled.

```
C:\Users\Manikanta\OneDrive\Desktop\clone 2\LearningGIT>git fetch
remote: Enumerating objects: 54, done.
remote: Counting objects: 100% (50/50), done.
remote: Compressing objects: 100% (37/37), done.

```

## 5. linux awk command:

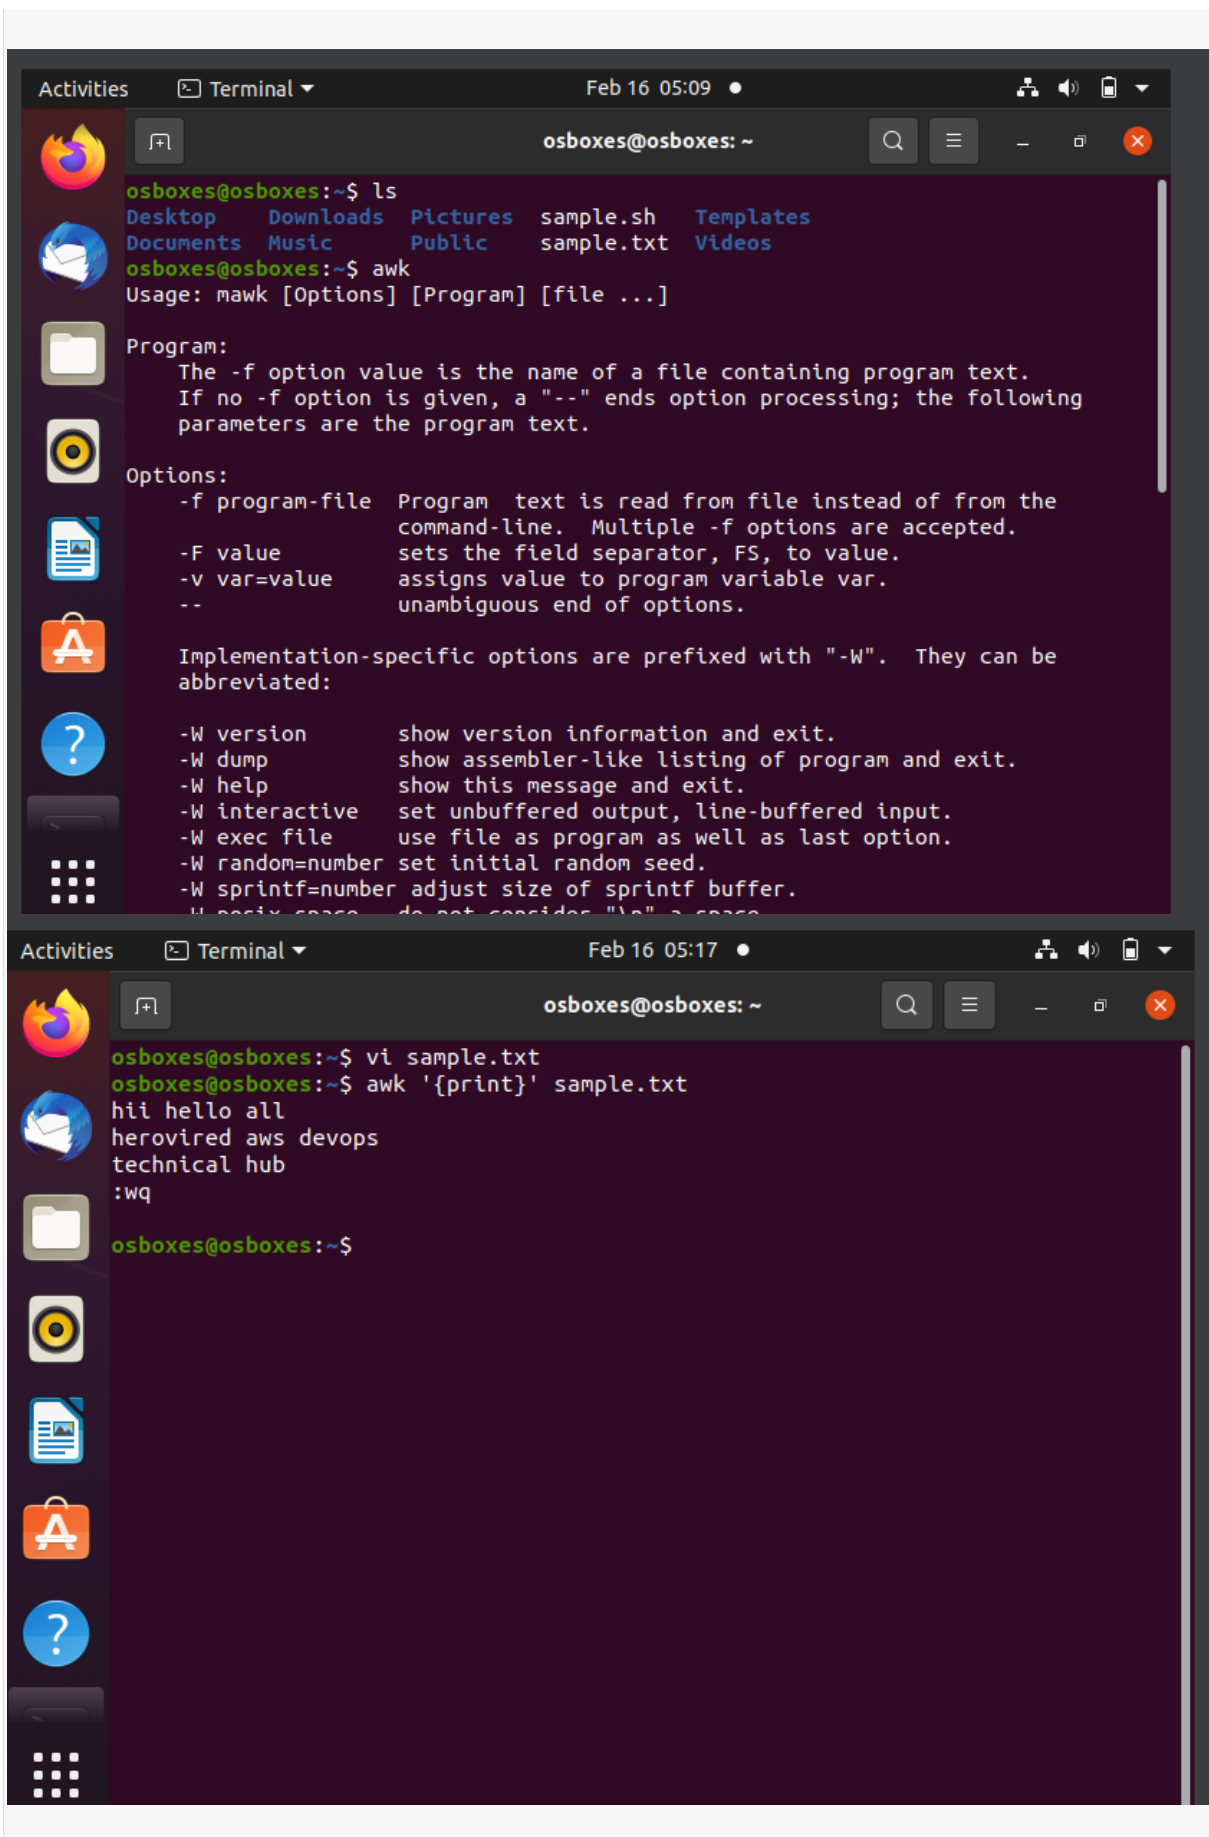

The linux awk command scans the file line by line and performs action on matched lines.

This command prints every line from the mentioned file and also prints line when a specific word is mentioned.

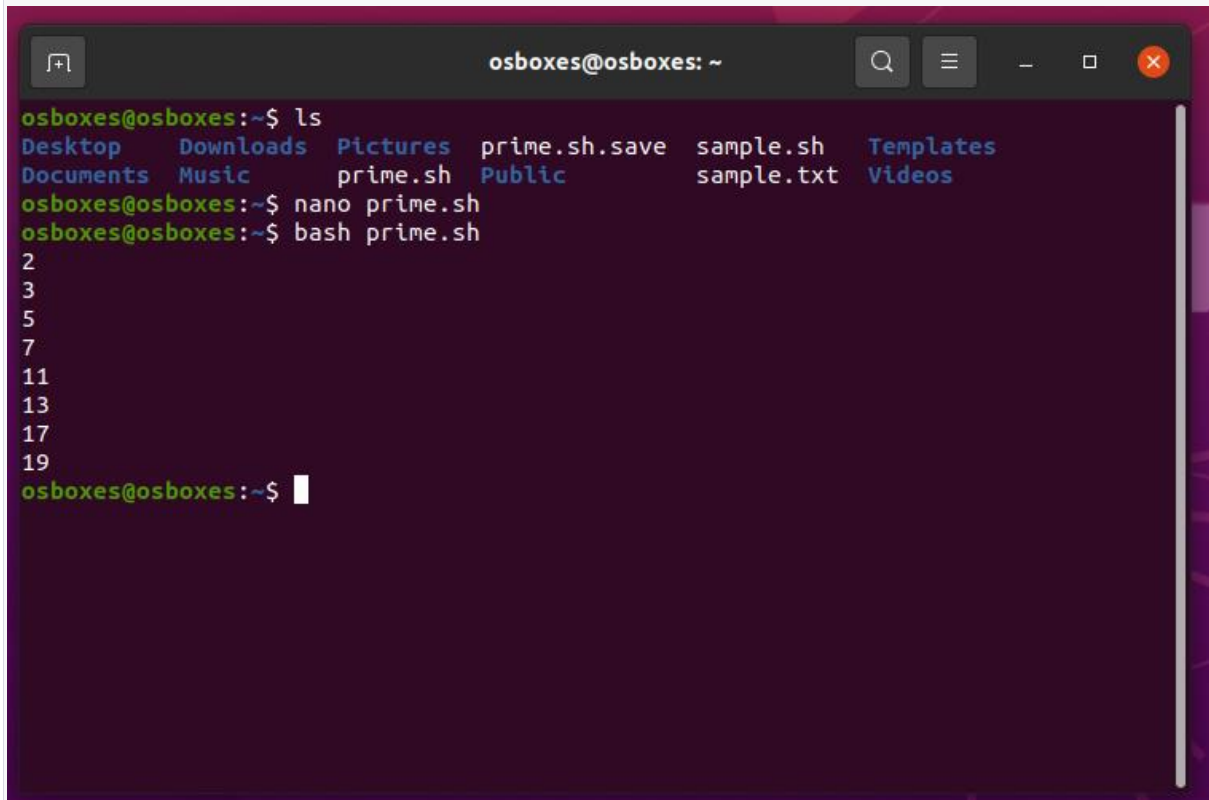

AWK can perform a wide range of text processing tasks, including:

1. Searching and replacing text
2. Extracting specific columns from a file
3. Formatting text and output
4. Calculating and summarizing data
5. Filtering data based on conditions

AWK can also use regular expressions and pattern matching to perform complex text processing tasks. It is a powerful tool that is widely used for data analysis, system administration, and other text processing tasks in Linux and other Unix-like operating systems.

## 6. Bash script for prime from 1-20

```
osboxes@osboxes: ~  
osboxes@osboxes:~$ ls  
Desktop    Downloads  Pictures  prime.sh.save  sample.sh  Templates  
Documents  Music      prime.sh  Public         sample.txt  Videos  
osboxes@osboxes:~$ nano prime.sh  
osboxes@osboxes:~$ bash prime.sh  
2  
3  
5  
7  
11  
13  
17  
19  
osboxes@osboxes:~$
```

## 7. running ubuntu in interactive mode

```

Manikanta@LAPTOP-DGVL1CM MINGW64 ~/OneDrive/Desktop/clone 2/LearningGIT (master)
$ docker login
Error: Cannot perform an interactive login from a non TTY device

Manikanta@LAPTOP-DGVL1CM MINGW64 ~/OneDrive/Desktop/clone 2/LearningGIT (master)
$ docker login
Authenticating with existing credentials...
Login Succeeded

Logging in with your password grants your terminal complete access to your account.
For better security, log in with a limited-privilege personal access token. Learn more at https://docs.docker.com/

```

```

Manikanta@LAPTOP-DGVL1CM MINGW64 ~/OneDrive/Desktop/clone 2/LearningGIT (master)
$ docker images
REPOSITORY          TAG         IMAGE ID      CREATED       SIZE
kumar1611/pythonflask latest      c03d98cf6d50  3 days ago   156MB
pythonflask         latest      c03d98cf6d50  3 days ago   156MB
